Product Summary

Protects your garbage, contents fully secured from third party access
Lock opens automatically when emptied at refuse truck, triggered by gravity
from hauler's automated lifting systems

The lock does not open when the container falls to the back, to the left or to
the right which can happen when the truck, collecting the waste, pushes

against the container, or when the containers falls down due to strong wind, by vandalism etc.

- Re-Locks automatically after bin is emptied at refuse truck

Product Description

Secure your trash bin contents against illegal dumping by third parties and protect its contents from being ravaged by animals...with the Gravity Feed Container Lock.

- Protects your garbage, contents fully secured from third party access - Lock opens automatically when emptied at refuse truck, triggered by gravity from hauler's automated lifting systems - The lock does not open when the container falls to the back, to the left or to the right which can happen when the truck, collecting the waste, pushes against the container, or when the containers falls down due to strong wind, by vandalism etc. - Gravity Lock comes with a master & spare key - Re-Locks automatically after bin is emptied at refuse truck - Easy to fit with reliable design - The lock is constructed for the assembling on 2 wheel containers from 60 to 360 liters - At the moment we have two versions => a "normal/large" one which fits to 80-90% of all standard 2 wheel containers and => a "small" one which is constructed for the so called EURO-2 lids - We are supplying the locks with "TORX"-head screws which is more comfortable for the teams mounting the locks on containers than the cross-slotted screws - Our locks have meanwhile passed all standard tests like sprayed for two minutes by water, then placed into a freezer for 2 days at -18° => no function problem, the same when the lid is under strong tension by over packing the container => the lock opens. - The lock does not open when the container falls to the back, to the left or to the right which can happen when the truck, collecting the waste, pushes against the container, or when the containers falls down due to strong wind, by vandalism etc. - Due to the slim size of our lock part which is fixed in the container and the soft PE seal we supply, the lock can be fixed without any additional plate to circular segmented containers. - By small modifications in the mechanism of the lock,

this can be used also on 4-wheel containers of 550, 660, 770 etc liters. **Why people are locking up their garbage...**

Pay by Weight Garbage

A number of communities have started pay by weight trash collection, giving rise to the unscrupulous practice of people filling their neighbor's bins.

Protect your trash from animals

Dogs, bears and coyotes actually open container lids, turn bins on their sides and ravage the human food remains in the garbage - leaving an unhealthy mess to be cleaned up!

Protect the Homeless from Poisonous Trash

In some areas the homeless have been known to eat from garbage cans, consuming poisonous remains instead of seeking food kitchens and shelters.

Product Attributes

- Weight: 2 lbs

- Technical Details: The lock is constructed for the assembling on 2 wheel containers from 60 to 360 liters At the moment we have two versions => a "normal/large" one which fits to 80-90% of all standard 2 wheel containers and => a "small" one which is constructed for the so called EURO-2 lids We are supplying the locks with "TORX"-head screws which is more comfortable for the teams mounting the locks on containers than the cross-slotted screws Our locks have meanwhile passed all standard tests like sprayed for two minutes by water, then placed into a freezer for 2 days at -18° => no function problem, the same when the lid is under strong tension by over packing the container => the lock opens. The lock does not open when the container falls to the back, to the left or to the right which can happen when the truck, collecting the waste, pushes against the container, or when the containers falls down due to strong wind, by vandalism etc. Due to the slim size of our lock part which is fixed in the container and the soft PE seal we supply, the lock can be fixed without any additional plate to circular segmented containers. By small

modifications in the mechanism of the lock, this can be used also on 4-wheel containers of 550, 660, 770 etc liters.
